

Execution Report

Executive Summary

Intent: Hey suggest an intersting sport for me

Plan Overview

- 1. Ask the user about their preferences regarding sports. Inquire about their preferred physical activity, interests, learning curve tolerance, preferred environment (indoor/outdoor), and desired level of competition.
- 2. Based on the user's preferences, search for sports that match their interests. The search should consider a variety of sports, from mainstream to niche, and include details like the required physical skills, rules, and popularity.
- 3. Summarize the information gathered by the web agent, matching sports to the user's input. Provide a list of sports with brief descriptions and explain why each sport might be suitable for the user. Then, make a recommendation for the user based on their preferences.
